Notes:

Cost Data: Prices in the chart above are based on PPO contracted rates and include a bundle of related services that are generally a standard part of this procedure or treatment.

Typical High/Low Cost: Most procedures involve a particular bundle of related services, tests and visits. Based on our members' history, we've developed a standard bundle that's typical for this procedure. Each price range includes the typical price for this procedure's bundle of related services, including facility, physician and other services, like lab tests and x-rays, so you can see the total price of having a procedure done, not just the surgery itself. Whether your actual price falls within the range depends on which of these related services your doctor recommends or prescribes for your treatment, as well as your own condition.
